

Legat de simularile rulate in Riverbed Modeler...cateva observatii “benefice”

Pasul 1: In primul rand, verificam DES Log... Daca nu apar aici mesaje tip “Warnings”... Bucurie!...trecem la pasul 2...de la pagina 10 (jos!)...din prezentul material....

Din pacate, “mai la toata lumea”, incepand cu Laboratorul 1, Scenariul 1.... In DES Log sunt mesaje de tipul WARNING(S):

WARNING(S):

Application 'Database Access (Light)' in profile 'Sm_Int_Profile' is unknown.
It will be ignored by all clients calling this
profile and less traffic than expected will be
generated.

REASON(S):

Application is not defined in 'Application Definitions'
object.

SUGGESTION(S):

- Get a 'Application Definitions' Object from
'Utilities' palette if not present in the
network.
- Define application with name 'Database Access (Light)'. This application
will be accessible by all nodes in the network.

The error was that the 'Database Access (Light)' application definition was not defined in the 'application definition' object.

=====

RETETA: ...ceva documentare suplimentara “din mers”iata ca solutii se gasesc...sunt accesibile in mediul academic...pe forumuri de specialitate...etc

Glad to hear you found the answer. For more information on this, please refer to this previous discussion on the same topic:

[How to repair "Basic Processes" object library](https://splash.riverbed.com/message/17645#17645)

<https://splash.riverbed.com/message/17645#17645>

You may also find a fixed project file archive from the extension below:

How to repair "Basic Processes" object library

<https://splash.riverbed.com/message/17645#17645>

In a [previous discussions](#), Elvis Ochieng explained that there is a missing configuration on the Application_Config object in Sm_Int_Model_List.

He provides two solutions there, first one explain how to correct this missconfiguration once the object is on the project and as a second one he provides us with a corrected project.

I would like to know if it's possible to "repair" this object inside Sm_Int_Model_List, or replace it by a new one. This way students could follow "Basic Processes" tutorial without any problem. If you are using this tutorial in a class setting, you may choose to make the changes on each PC, or use the packaged model I already created and unpack it on every machine in the class. Either method will require some prior changes before the students can proceed with the lab in class. Or perhaps You can include these steps as part of the tutorial so that they can learn how to deploy standard applications in Modeler

“Cel mai mare neajuns al nostru este că renunțăm prea repede. Cel mai corect drum spre succes este să mai încerci o dată.”

Thomas Edison

Ca urmare....revenim la Pasul 1: In primul rand, verificam DES Log... Daca nu apar aici mesaje tip “Warnings”...Bucurie!...trecem la pasul 2

In cazul acesta, intr-adevar...BUCURIE!

Pasul 2: Selectam Results Browser

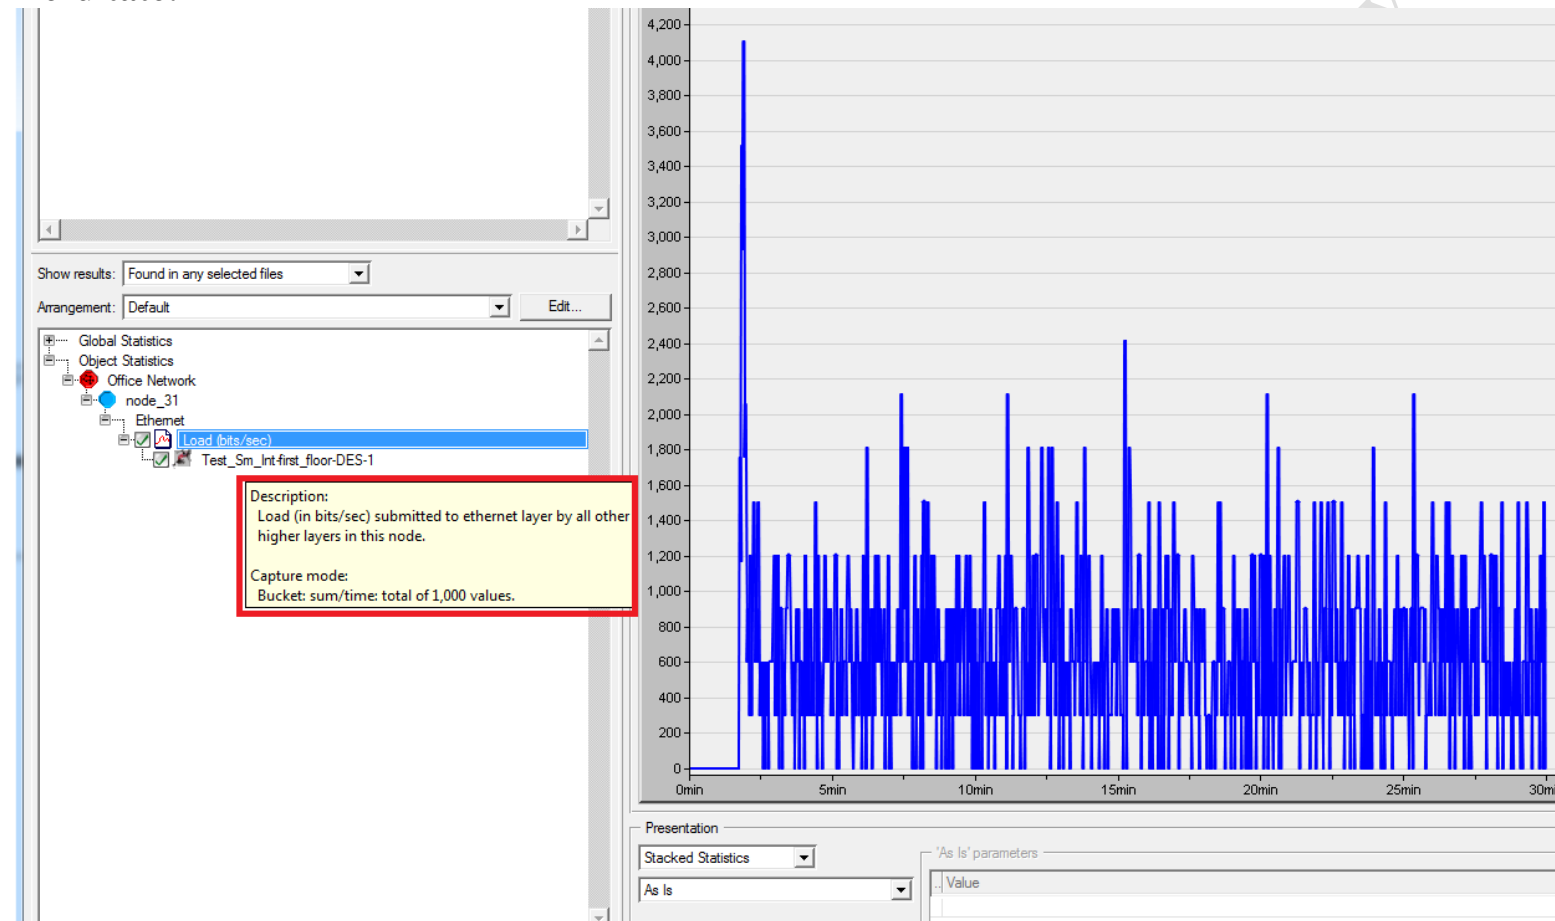

si, din aproape in aproape, in raport cu ceea ce ne-am propus, identificam rezultatele simularii (simularilor!)... Cele de mai jos, cam asa, ar trebui sa gasesc prin .doc –uri

SCOP:

Description:
Load (in bits/sec) submitted to ethernet layer by all other higher layers in this node.

Capture mode:
Bucket: sum/time: total of 1,000 values.

Rezultate:

+ COMENTARII!

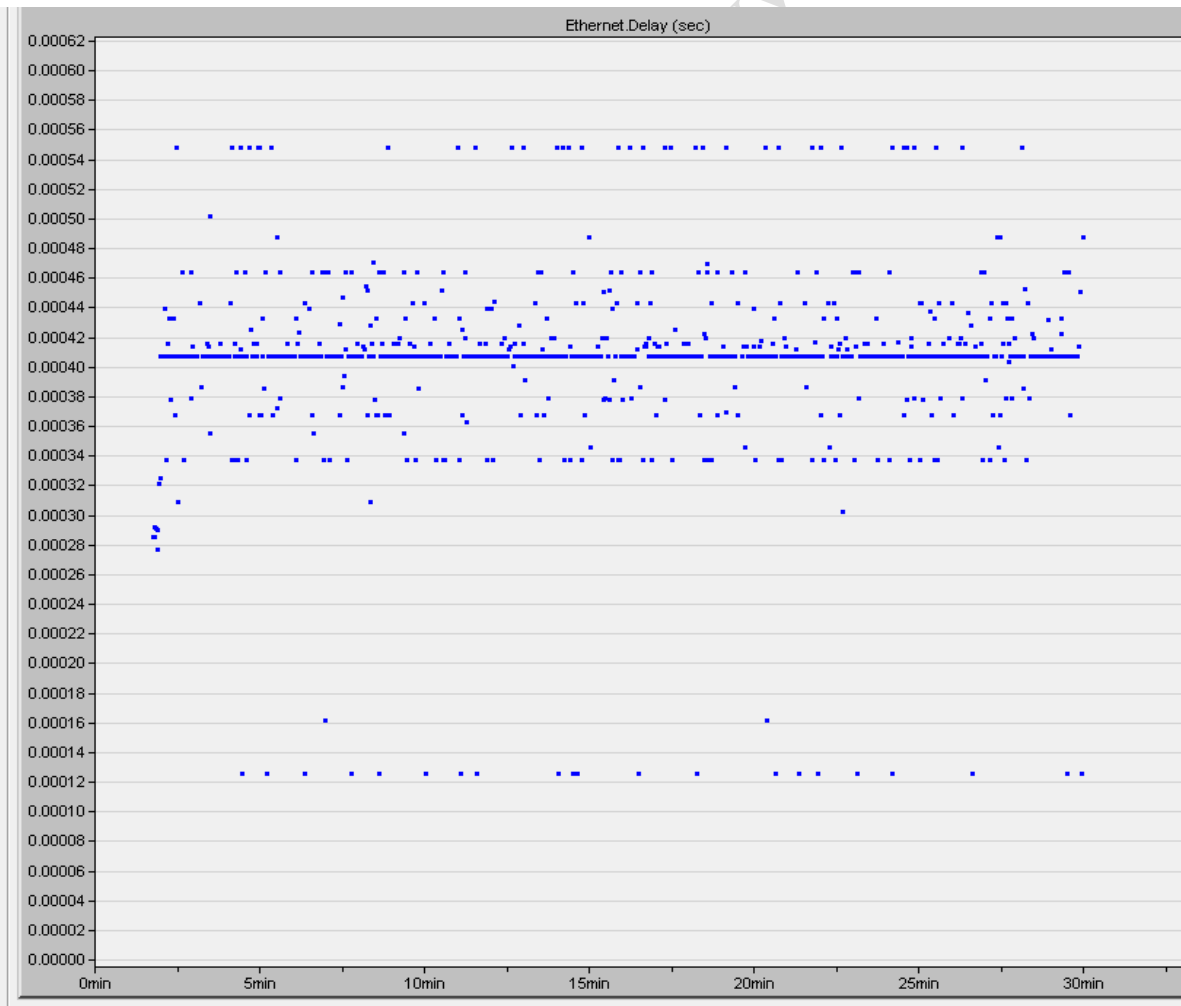

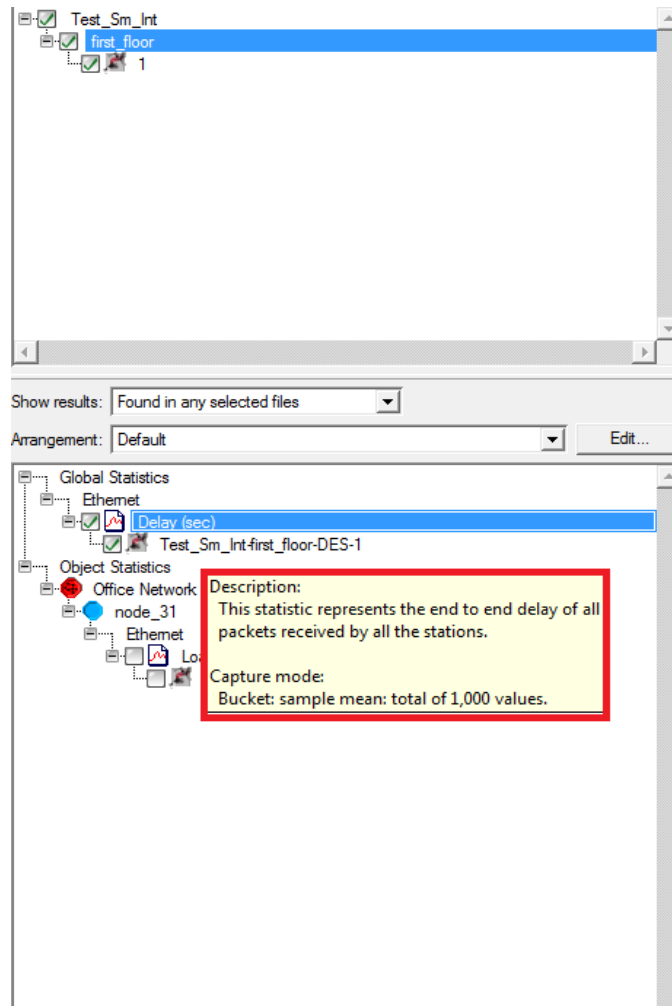

SCOP:

Description:

This statistic represents the end to end delay of all packets received by all the stations.

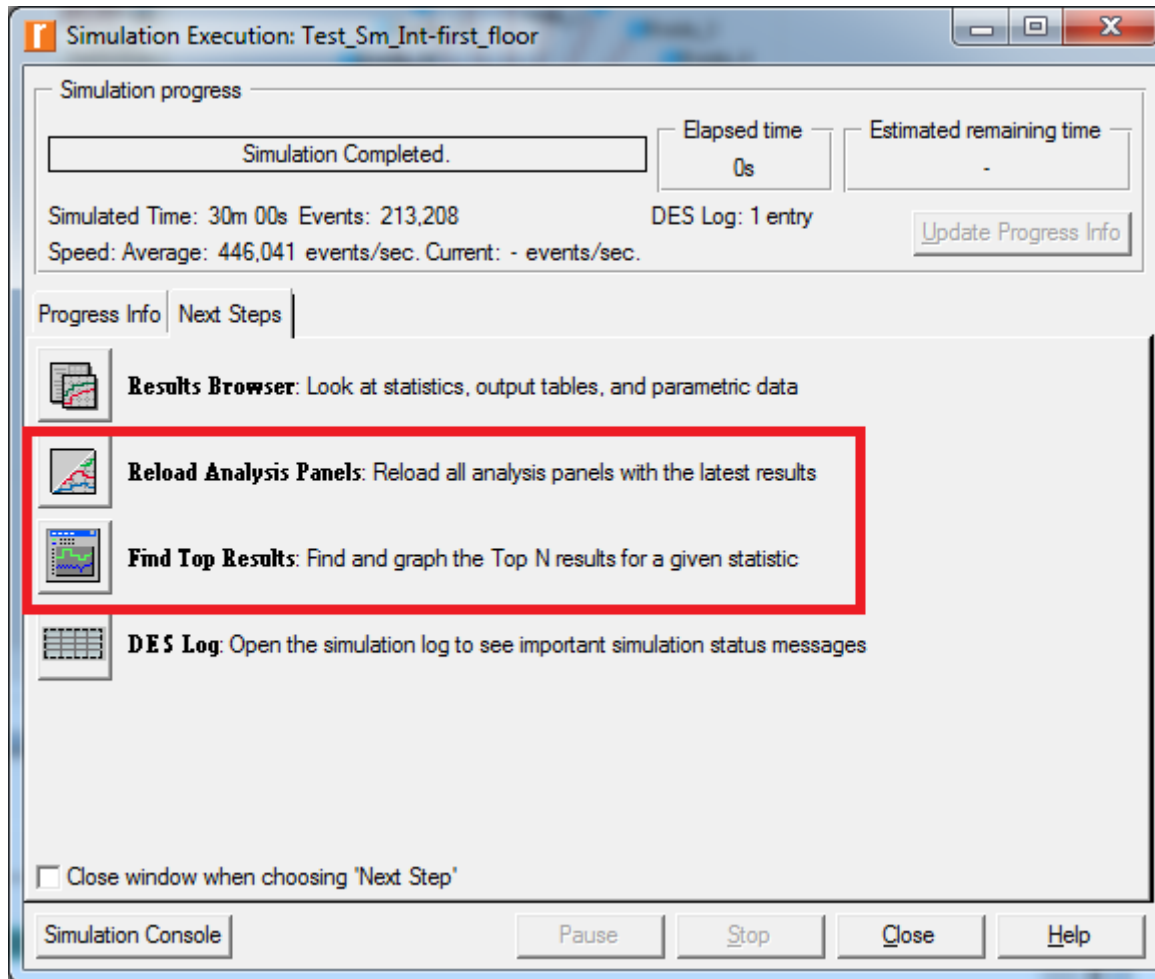

Capture mode:

Bucket: sample mean: total of 1,000 values.

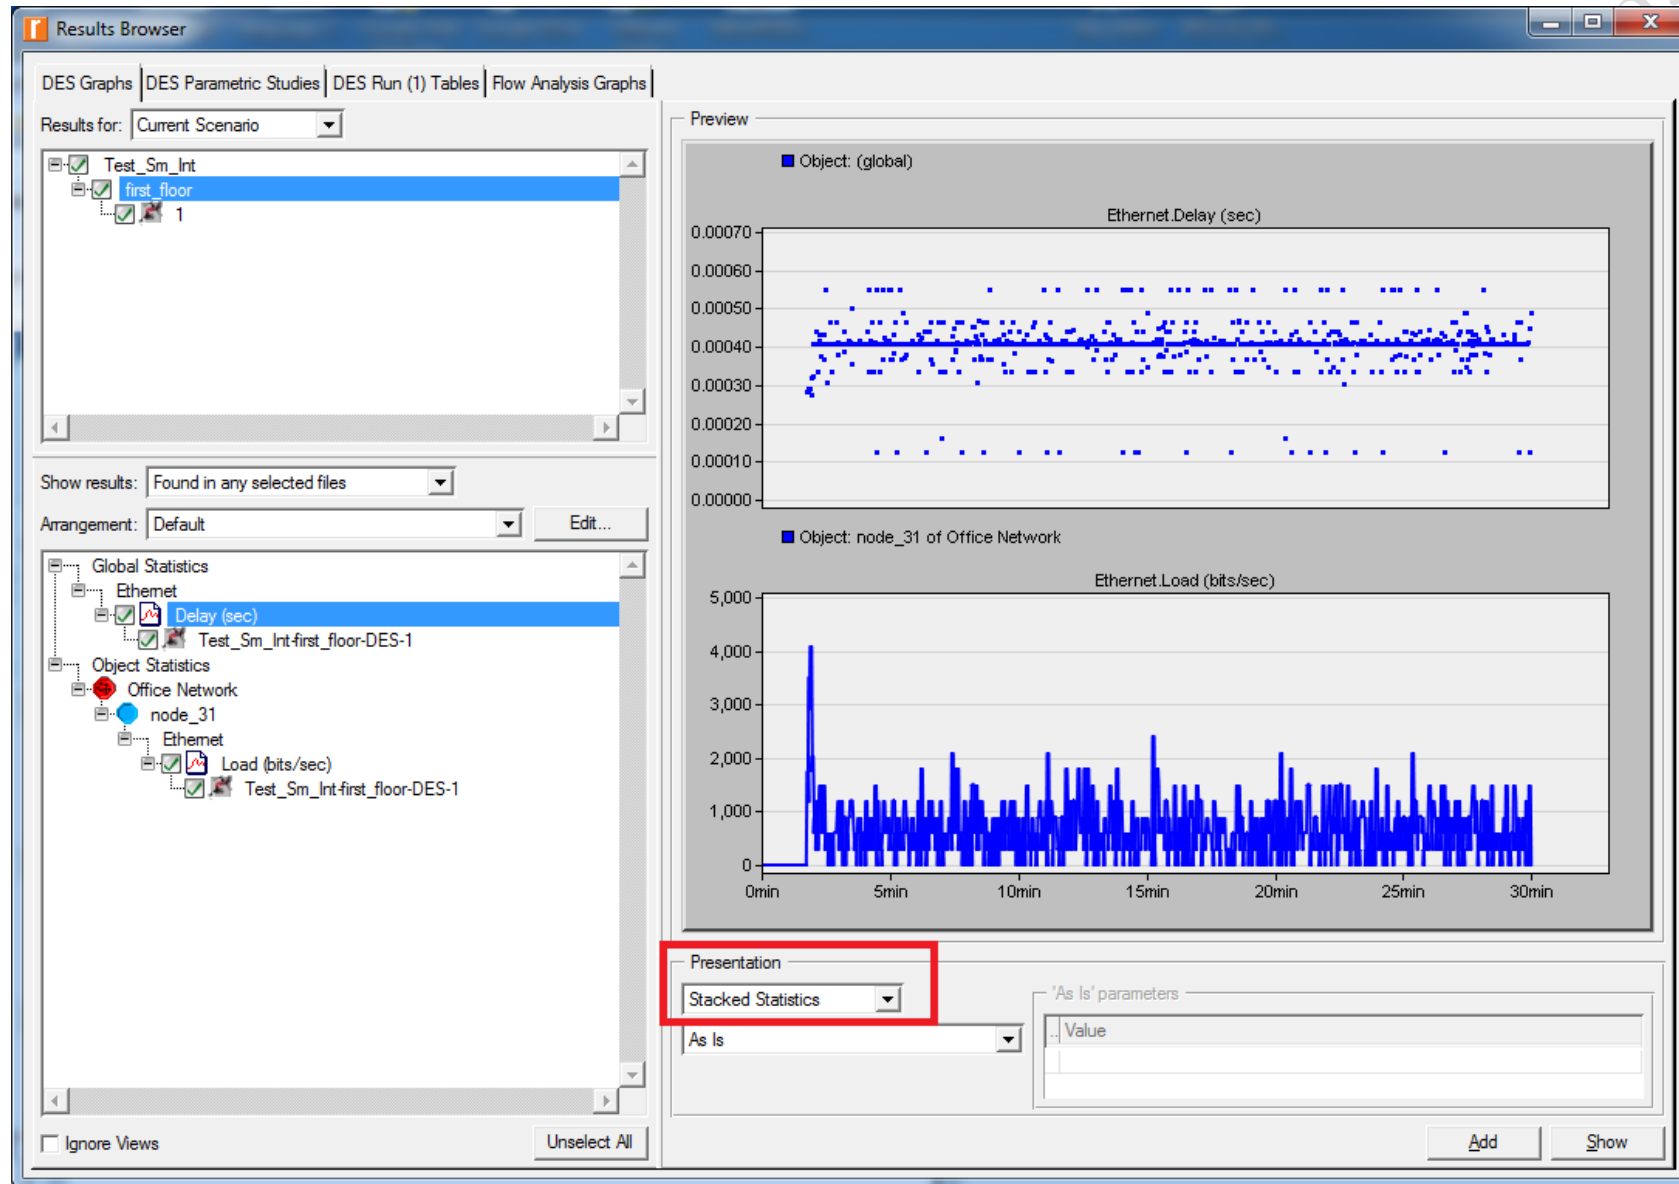

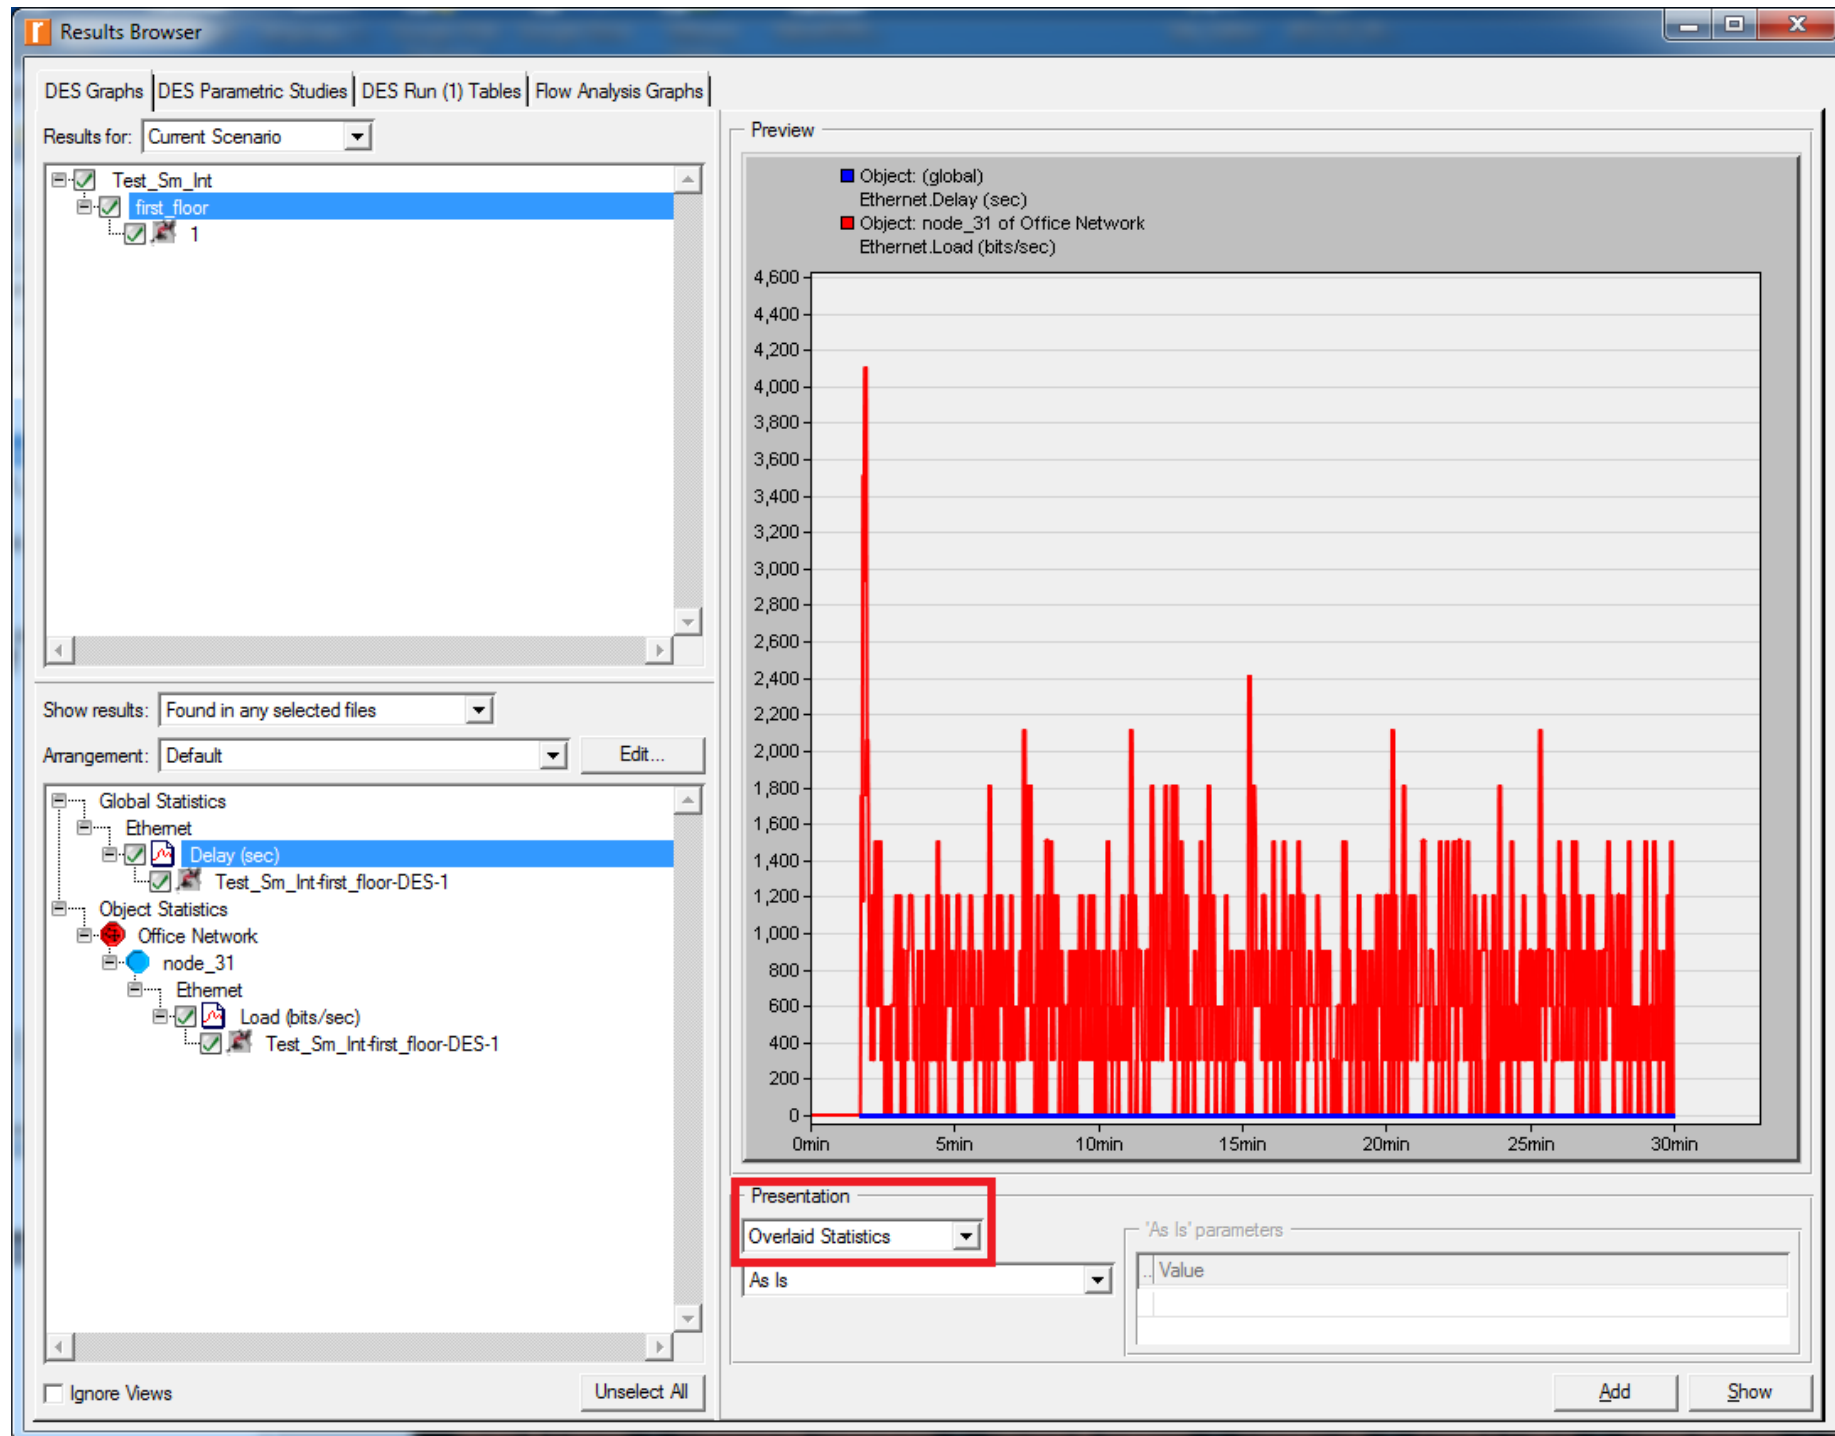

+ COMENTARII!

Pasul 3: Mai avem si alte optiuni...

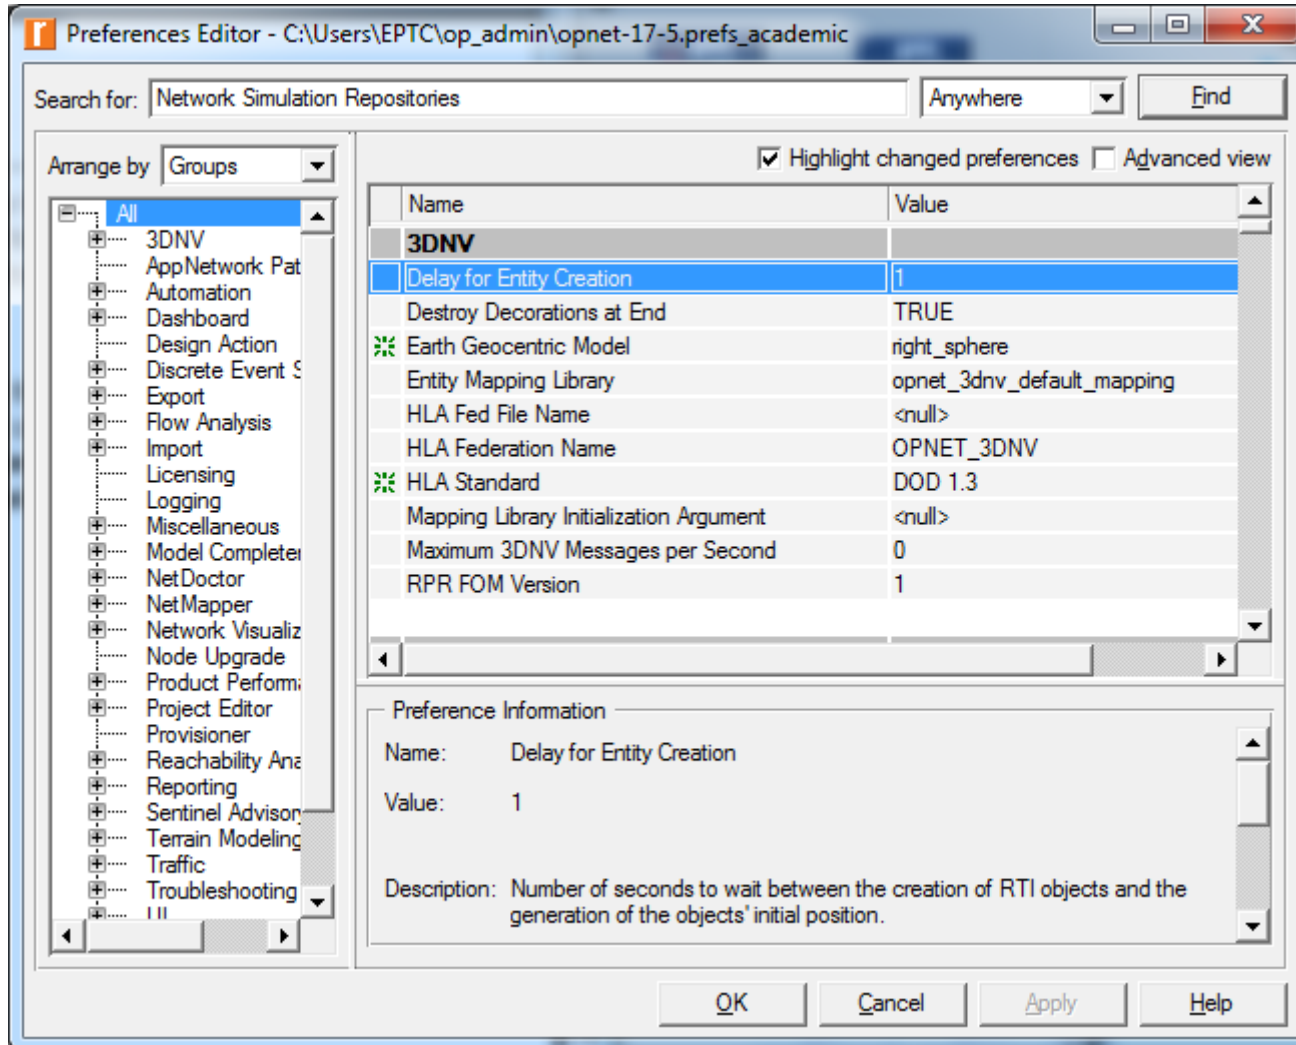

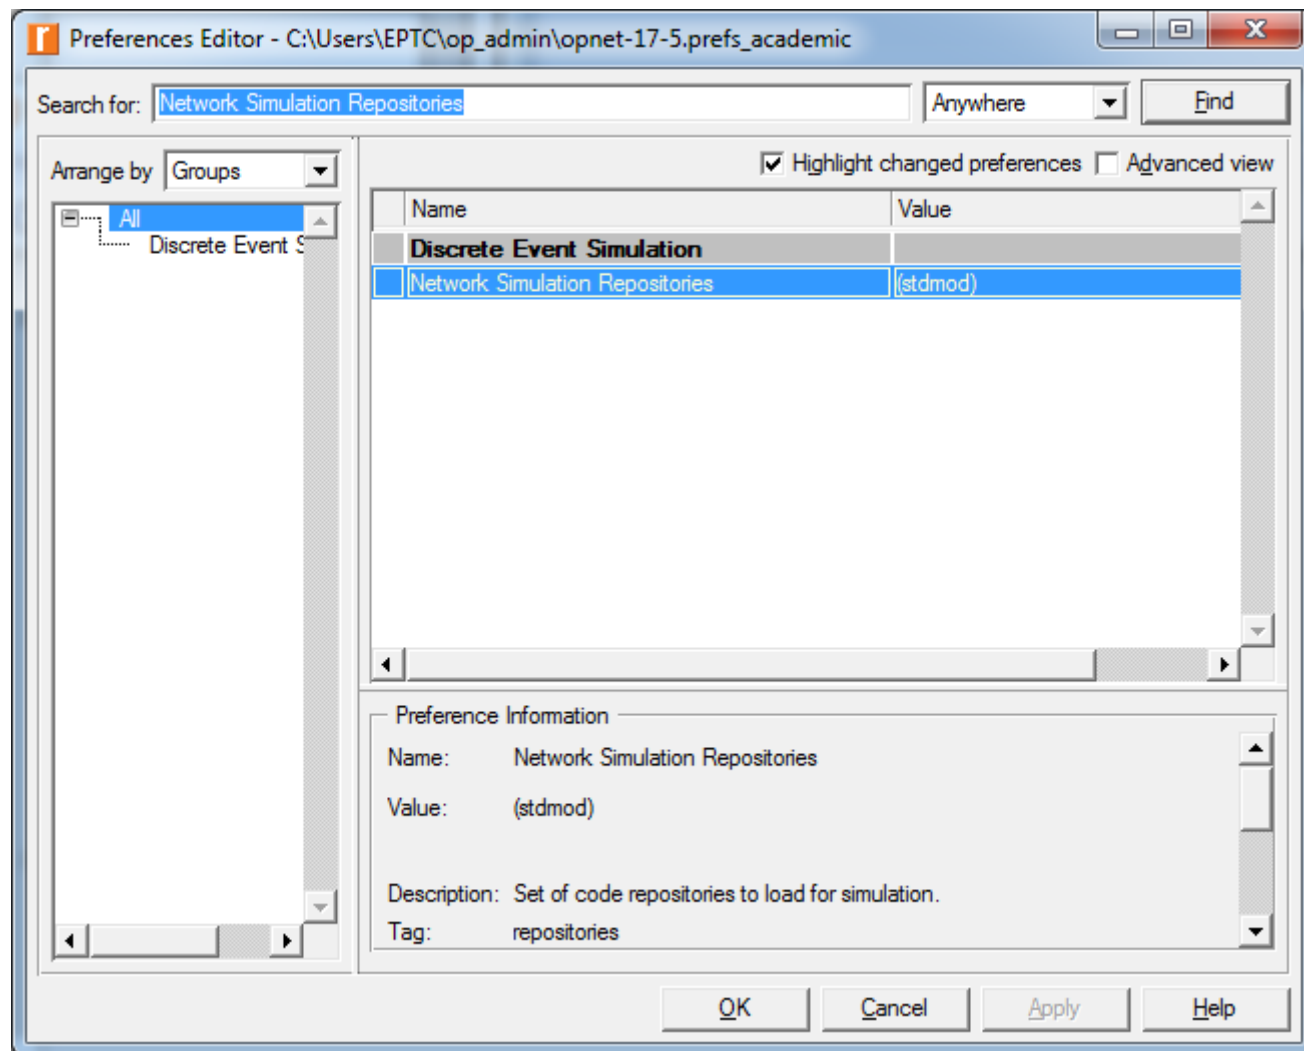

Pasul 4: Interpretam rezultatele simularii (simularilor)...analize comparative...etc, functie de scenariul recomandat in materialele din laboratoare....

Note—Be sure to delete the stdmod setting for the Network Simulation Repositories preference when you are finished doing tutorials. To delete the setting, select Edit > Preferences, search for Network Simulation Repositories, click on the value, and choose Delete.

Note—Be sure to delete the **stdmod** setting for the **Network Simulation Repositories** preference when you are finished doing tutorials. To delete the setting, select **Edit > Preferences**, search for **Network Simulation Repositories**, click on the value, and choose **Delete**.

- Expanding the Network
- Comparing Results

network. Although server load has increased, delay has not.

9 Close the graph and the Results Browser.

10 Select **File > Close** and save changes before closing.

End of Procedure 2-18

TUT-2-25

OPNET Modeler/Release 16.1

—Small Internetworks

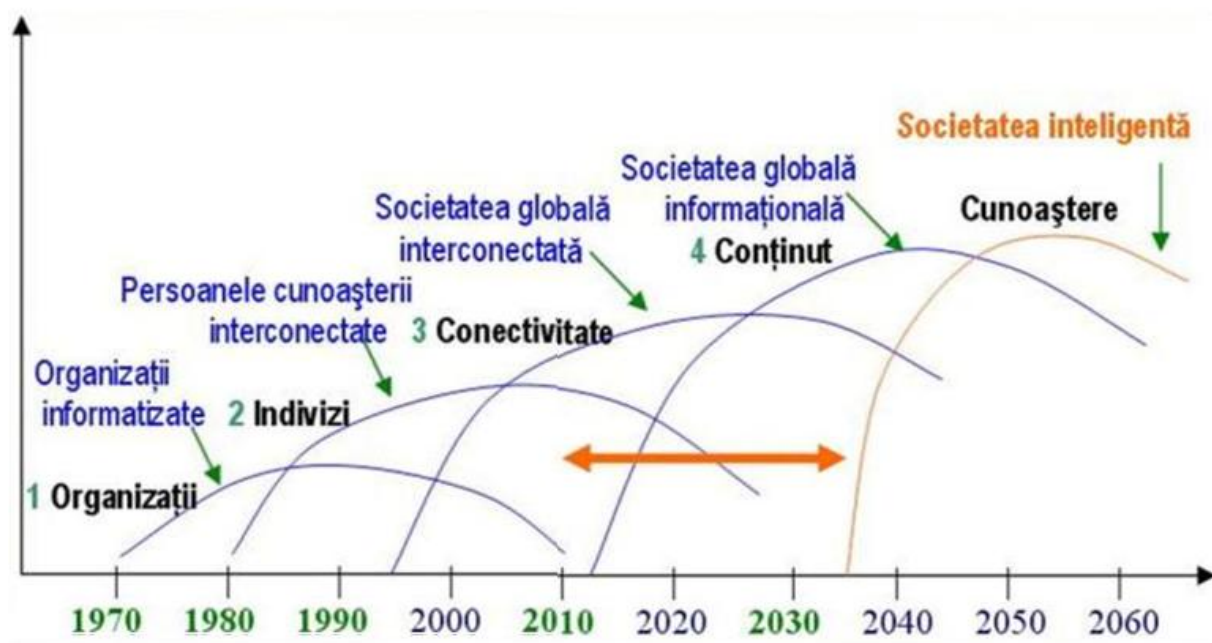

Now you are ready to go on to the M/M/1 Queue tutorial. This tutorial explores the use of node models in the workflow. Return to the main tutorial menu and choose **M/M/1 Queue** from the list of available tutorials. Or, if you prefer, choose another tutorial of interest.

Note—Be sure to delete the **stdmod** setting for the **Network Simulation Repositories** preference when you are finished doing tutorials. To delete the setting, select **Edit > Preferences**, search for **Network Simulation Repositories**, click on the value, and choose **Delete**.

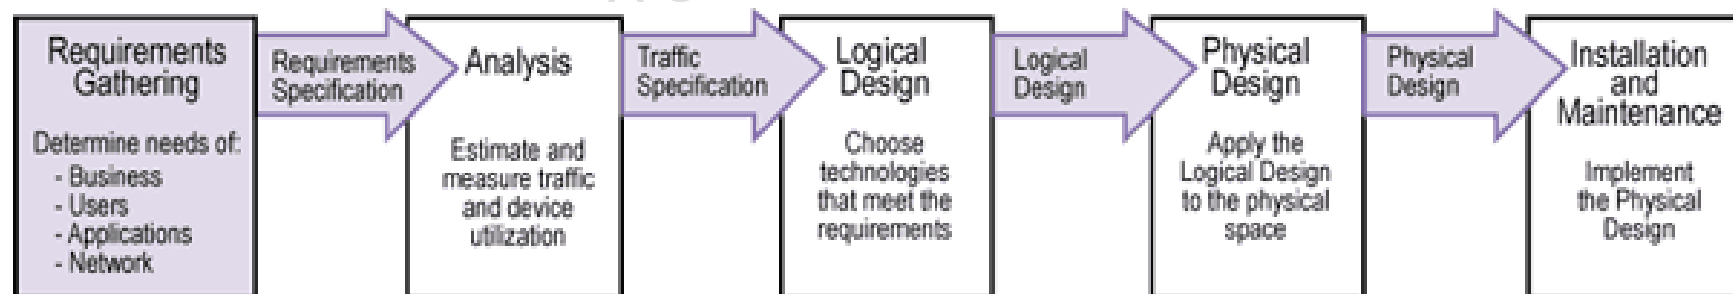

"There are three kinds of death in this world. There's heart death, there's brain death, and there's being off the network. "
